Summary

Full Stack Developer with 7+ years of experience architecting and maintaining scalable web applications using Laravel (PHP), Angular (TypeScript), and Python. Experienced in building backend APIs, distributed systems, and high-performance frontend applications across complex business environments. Recently focused on AI integration and RAG-based solutions leveraging Large Language Models (LLMs) to automate workflows and enhance user experiences.

Experience

Ambra

Full Stack Engineer

Remote | São Paulo, Brazil

January 2022 - March 2026

- Architected and developed scalable microservices using Python (FastAPI) and PHP (Laravel) within a distributed Docker-based environment.
- Built Angular front-end applications integrated with asynchronous microservices using RabbitMQ, supporting complex distributed workflows.
- Collaborated in code reviews, testing, architecture discussions, and technical decision-making within Agile teams.
- Managed MySQL, MongoDB, and AWS S3 integrations for scalable document processing and distributed data handling.
- Investigated and resolved complex cross-service production issues through deep debugging, reverse engineering, and analysis of legacy and distributed systems.
- Developed unit tests and contributed to the evolution and maintenance of large-scale applications with minimal supervision.

Guardião Digital

Full Stack Engineer

São José do Rio Preto, SP, Brazil

May 2019 – November 2021

- Contributed to the modernization of a large legacy Flash application into a modern Angular + Laravel platform with redesigned architecture and UI.
- Developed and maintained complex business-critical features, APIs, Angular components, and PostgreSQL queries/functions across multiple large-scale applications.
- Independently led standalone projects, handling architecture, backend development, database design, debugging, deployments, and production support with minimal supervision.
- Troubleshoot undocumented legacy systems, resolved complex production issues, and maintained legacy AngularJS/Angular 2 applications during modernization initiatives.

Additional Experience & Projects

Act Like You Matter

Contributed on a voluntary basis within an international English-speaking team, developing React-based features and collaborating in a fully remote environment.

Flowboard (GitHub)

AI-powered task management platform with drag-and-drop workflows, semantic tagging, and LLM-based content generation. Built with Angular, Laravel, and Python, featuring RAG-based context retrieval and Dockerized infrastructure for scalable development.

Technical Skills

Backend & Messaging:

PHP, Laravel, PHPUnit, Python, Pytest, RabbitMQ, REST APIs, Node.js

Frontend & Styling:

TypeScript, JavaScript, Angular, React, Next.js, Remix, Tailwind CSS, HTML, CSS, Vitest

Databases & Infrastructure:

SQL, MySQL, PostgreSQL, MongoDB, Docker, Linux, Git

Cloud Platforms:

Azure, DigitalOcean, Vercel

AI & Automation:

Retrieval-Augmented Generation (RAG), Large Language Models (LLMs)

Education & Certifications

- **Retrieval Augmented Generation (RAG)** - DeepLearning.AI
- **High School** - Escola Estadual Francisco Marques Pinto

Certification - March 2026

Completed - Dezembro 2017
