SUMMARY

Full Stack Developer with over 6 years of experience, primarily working with Laravel, Angular, and React. Experienced in building distributed systems using microservices architecture, message queuing with RabbitMQ, and integration with multiple databases. Strong backend focus, data modeling, and complex problem-solving skills, along with experience in Python and interest in AI applications, RAG, and LLMs.

EXPERIENCE

Ambrat — Full Stack Developer (Mid-Level)

São Paulo, SP, Brazil | Remote

January 2022 – March 2026

- Developed and maintained features in a microservices architecture using Laravel, Angular, and Python.
- Integrated microservices (payments, notifications, communication) using RabbitMQ.
- Designed and implemented data structures with MySQL and MongoDB, including migrations and query optimization.
- Participated in architecture decisions, contributing to scalability and service organization.
- Performed code reviews and refactoring of legacy code, improving performance and maintainability.
- Identified and fixed complex bugs in distributed systems, ensuring application stability.
- Collaborated in an agile team using Scrum methodology.
- Worked with cloud services using Azure, supporting application deployment and maintenance.

Guardião Digital — Full Stack Developer (Mid-Level)

São José do Rio Preto, SP, Brazil | On-site

May 2019 – November 2021

- Developed and maintained monolithic applications using Laravel and Angular.
- Participated in rewriting a legacy Flash application into a modern architecture using Angular and Laravel.
- Worked extensively with SQL, analyzing and optimizing complex queries and database functions.
- Debugged legacy systems, identifying and fixing issues in critical functionalities.
- Developed solutions using plain PHP as well as frameworks, adapting to different system contexts.
- Worked on multiple projects simultaneously, implementing new features and fixing bugs.
- Built image processing solutions for data analysis automation using specialized libraries.
- Developed image processing pipelines using OpenCV for automated data analysis.

Act Like You Matter — Volunteer Frontend Developer

San Diego, CA, United States | Remote

May 2025 – July 2025

- Collaborated with an international team in English-speaking meetings and asynchronous communication via Slack, contributing to technical and strategic decisions.
- Developed web interfaces using React and Next.js for an interactive application.
- Implemented features and improvements focused on user experience.

PROJECTS

Flowboard — AI Project Management Tool

December 2025 – March 2026

[GitHub](#)

- Built a full-stack application using Angular, Laravel, and Python supporting multiple users and workspaces.
- Implemented a drag-and-drop interface for dynamic task and column management.
- Integrated LLM-based functionality using prompt engineering for content generation, with ongoing RAG implementation studies.
- Configured Docker environment for standardized development setup.

Financial Manager — Financial Management System

October 2023 – February 2026

[GitHub](#)

- Developed a system for personal and business financial management.
- Built UI using React and Remix focused on usability and organization.
- Implemented advanced transaction filters and CSV export for financial analysis and accounting integration.
- Modeled and managed data using MongoDB with Docker-based replication.
- Built data visualization dashboards with GraphQL integration.
- Structured code with focus on scalability, organization, and maintainability.

Portfolio — Personal Website

August 2025 – March 2026

[GitHub](#) | [Live Demo](#)

- Developed a personal portfolio using React and Next.js.
- Built a reusable, component-based architecture.
- Styled with Tailwind CSS for responsive design.
- Integrated external APIs (weather forecast and time zones).

LANGUAGES

Portuguese (Native) | English (Advanced)

TECHNOLOGIES

Backend:	Laravel, PHP, Python
Frontend:	Angular, React, Next.js, Tailwind CSS
Databases:	MySQL, MongoDB
Messaging:	RabbitMQ
Tools:	Docker, Git, Linux
Cloud:	Azure

COURSES & CERTIFICATIONS

Retrieval Augmented Generation (RAG) - DeepLearning.AI

EDUCATION

High School Diploma (Completed)
