

Jhonatan Ferreira

São José do Rio Preto, SP, Brazil | contact@jhonatanferreira.dev | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

Summary

Full Stack Developer with over **7 years** of experience architecting and maintaining scalable web applications. Expert in **Laravel (PHP)** and **Angular (TypeScript)** ecosystem, with a proven track record of delivering robust backend APIs and high-performance frontend interfaces. Recently focused on **AI integration**, developing custom solutions that leverage **Large Language Models (LLMs)** to automate processes and enhance user experience. Strong advocate for clean code, **SOLID** principles, and building impact-driven software in collaborative environments.

Experience

Ambra

Remote | São Paulo, Brazil

Mid-Level Full Stack Developer

January 2022 - March 2026

- Architected and developed scalable **microservices** using **Python (FastAPI)** and **PHP (Laravel)** deployed via **Docker** and developed in collaboration with **Agile** teams.
- Designed and implemented front-end applications with **Angular**, ensuring seamless integration with distributed back-end services.
- Established efficient asynchronous communication between microservices using **RabbitMQ**, optimizing distributed data exchange.
- Managed and optimized **MySQL** and **MongoDB** databases to ensure high availability and data integrity across decoupled services.

Guardião Digital

São José do Rio Preto, SP, Brazil

Mid-Level Full Stack Developer

May 2019 – November 2021

- Developed and optimized core enterprise features within a high-traffic **monolithic** architecture utilizing **Laravel (PHP)** and **Angular**.
- Engineered complex **SQL** queries and stored procedures to process large-scale corporate data efficiently within **Dockerized** environments.
- Refactored legacy code segments into modular **components**, significantly improving system stability, query performance, and codebase maintainability.
- Collaborated closely with product teams to design robust backend logic that accurately mapped intricate business rules into functional software solutions.

Additional Experience & Projects

Act Like You Matter

Contributed on a voluntary basis within an international, English-speaking team to engineer responsive user interfaces using **React**.

Flowboard (GitHub)

AI-powered task management platform with drag-and-drop workflows, semantic tagging, and LLM-based content generation. Built with **Angular**, **Laravel**, and **Python**, featuring **RAG**-based context retrieval and **Dockerized** infrastructure for scalable development.

Financial Manager (GitHub)

Financial management app with transaction tracking, analytics visualization, and CSV export for reporting. Built with **Remix** and **React**, focusing on performance and clean UI architecture.

Technical Skills & Certifications

Retrieval Augmented Generation (RAG) - DeepLearning.AI

March 2026

Backend & Messaging: PHP, Laravel, PHPUnit, Python, Pytest, RabbitMQ, REST APIs, Node.js

Frontend & Styling: TypeScript, JavaScript, Angular, React, Next.js, Remix, Tailwind CSS, HTML, CSS, Vitest

Databases & Infrastructure: SQL, MySQL, PostgreSQL, MongoDB, Docker, Linux, Git

Cloud Platforms: Azure, AWS, DigitalOcean, Vercel

AI & Automation: Retrieval-Augmented Generation (RAG), Large Language Models (LLMs)
